

# MATERIALS SCIENCE AND ENGINEERING

Everything Americans use is composed of materials, from computer chips to flexible concrete skyscrapers, from plastic bags to artificial hips, from fiber optical cables to automobiles. Materials Science and Engineering makes these materials reliable and useful through design, processing, and analysis of controlled compositions, microstructures, and properties. Without new materials, the next generation of computers, automobiles, aircraft telecommunications, skyscrapers, and medical implants will not exist. Materials of the future will be smart and think on their own, in addition to meeting traditional property demands. This field abounds with scientific challenges and technological excitement.

## Academic Learning Compact

The major enables students to develop an understanding of materials systems and their role in engineering. Emphasis is placed on the ability to apply knowledge of mathematics, science and engineering principles to materials science and engineering; to design and conduct experiments, as well as to analyze and interpret data; and to design a *program name* system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability.

The Materials Science and Engineering BS Program is accredited by the Engineering Accreditation Commission of ABET, <https://www.abet.org> (<https://nam10.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.abet.org%2F&data=05%7C01%7CDMAYH%40eng.ufl.edu%7C71f1da0d2bb2405acf0908db1519ea82%7C0d4da0f84a314d76ace60a62331e1b84%7C0%7C0%7C638126973271573797%7CUnknown%7CTWFpbGZsb3d8eyJWljiMC4wLjAwMDAiLCJQIjoiV2luMzliLCJBTiI6Ikl1haWwiLCJXVCi6Mn0%3D%7C3000%7C%7C%7C&sdata=Dc6bpEcUU8fM3vMsOTj6pGPQyLzoSeoS8v2s%2BFVnBE%3D&reserved=0>), under the General Criteria and the Program Criteria for Materials, Metallurgical, Ceramics and Similarly Named Engineering Programs.
