### STATISTICS

#### Course Search

Not all courses are offered every semester. Refer to the schedule of courses for each term’s specific offerings.

More Info

_Courses at the University of Florida, with the exception of specific foreign language courses and courses in the online Master of Arts in Mass Communication program, are taught in English._

#### Courses

**STA 2023 Introduction to Statistics 1**
Graphical and numerical descriptive measures. Simple linear regression. Prereq: STA 2023 or the equivalent

**STA 3032 Engineering Statistics**
The basic concepts in probability and statistics with engineering applications. Topics include probability, discrete and continuous random variables, estimation, hypothesis testing, and linear and multiple regression. Prereq: MAC 2311

**STA 4183 Theory of Interest**
Measurement of simple and compound interest, accumulated and present value. Annuities, yield rates, amortization schedules, sinking funds, bonds, securities and related funds. Prereq: MAC 2312

**STA 4210 Regression Analysis**
Simple linear regression and multiple linear regression models. Inference about model parameters and predictions, diagnostic and remedial measures about the model, independent variable selection, multicollinearity, autocorrelation and nonlinear regression. SAS implementation of the above topics. Prereq: STA 4210

**STA 4211 Design of Experiments**
The basic principles of experimental design: analysis of variance for experiments with a single factor; randomized blocks and Latin square designs; multiple comparison of treatment means; factorial and nested designs; analysis of covariance; response surface methodology. Prereq: STA 4210

**STA 4222 Sample Survey Design**
An introduction to the design of sample surveys and the analysis of survey data, the course emphasizes practical applications of survey methodology. Topics include sources of errors in surveys, questionnaire construction, simple random, stratified, systematic and cluster sampling, ratio and regression estimation, and a selection of special topics such as applications to quality control and environmental science. Prereq: STA 4321 and either STA 2023 or STA 3032 or STA 4322

**STA 4321 Introduction to Probability**
Introduction to the theory of probability, counting rules, conditional probability, independence, additive and multiplicative laws, Bayes Rule. Discrete and continuous random variables, their distributions, moments and moment generating functions. Multivariate probability distributions, independence, covariance. Distributions of functions of random variables, sampling distributions, central limit theorem. Prereq: STA 4321 or the equivalent

**STA 4322 Introduction to Statistics Theory**
Sampling distributions, central limit theorem, estimation, properties of point estimators, confidence intervals, hypothesis testing, common large sample tests, normal theory small sample tests, uniformly most powerful and likelihood ratio tests, linear models and least squares, correlation. Introduction to analysis of variance. Prereq: STA 4321 or the equivalent

**STA 4502 Nonparametric Statistical Methods**
Introduction to nonparametric statistics, including one- and two-sample testing and estimation methods, one- and two-way layout models and correlation and regression models. Prereq: STA 2023 or STA 3032 or STA 4210 or STA 4322

**STA 4504 Categorical Data Analysis**
Introduction to analysis of variance. Prereq: STA 3024 or STA 3032 or STA 4210 or STA 4322

**STA 4702 Multivariate Statistical Methods**
Inference about covariance structure including principal components, factor analysis and canonical correlation. Multivariate classification techniques including discriminant and cluster analyses. Additional topics at the discretion of the instructor, time permitting. Prereq: STA 3024 or STA 4210 or STA 4322

**STA 4712 Introduction to Survival Analysis**
Survival analysis data methods including Kaplan-Meier and Nelson estimators of the survival, accelerated failure time and proportional hazards models and frailty and recurrent event models. Prereq: STA 4210

**STA 4821 Stochastic Processes**
Theoretical development of elementary stochastic processes, including Poisson processes and their generalizations, Markov chains, birth and death processes, branching processes, renewal processes, queuing processes and genetic and ecological processes. Prereq: STA 4321 or equivalent
STA 4853 Introduction to Time Series and Forecasting 3 Credits
Stationarity, autocorrelation, ARMA models; frequency domain methods and the spectral density; forecasting methods; and computationally-oriented application to case studies.

Prereq: STA 4210 and STA 4321

STA 4905 Individual Work 1-5 Credits
Special topics designed to meet the needs and interests of individual students.

Prereq: department permission

STA 4911 Undergraduate Research in Statistics 3 Credits
Course provides firsthand, supervised research in Statistics. Projects may involve inquiry, design, investigation, scholarship, discovery or application in Statistics.

STA 4930 Special Topics 3 Credits
Variable topics designed to meet the students’ needs and interests.

Prereq: department permission

STA 4940 Internship 1-3 Credits
Supervised activity associated with planning and/or analyzing data from a research project. Supervision by a faculty member or delegated authority and a post-internship written report are required. (S-U)

Prereq: STA 4211 and undergraduate coordinator permission
